PROFESSIONAL SUMMARY

AI-focused Computer Science graduate with hands-on experience in AI-driven development, backend engineering, and scalable system design. Strong foundation in Python, SQL, RESTful APIs, and multi-agent LLM systems, building production-ready AI applications with optimized performance, semantic retrieval, and secure data workflows.

EDUCATION

MEENAKSHI COLLEGE OF ENGINEERING

Bachelor of Engineering in Computer Science, Cumulative GPA: 7.62 / 10

Chennai, TN

Oct 2021 – May 2025

WORK EXPERIENCE

KRION CONSULTING PVT LTD

AI Developer

Chennai, TN

Dec 2025 – Present

- Worked across three AI-driven products spanning enterprise analytics, construction quantity take-off and construction intelligence; designed and engineered solutions across LLM applications, RAG/NL2SQL, computer vision, multi-agent systems and full-stack development using Python, FastAPI, NestJS, Angular, React, PostgreSQL and Docker.
- Engineered an AI-powered SQL Assistant with hybrid deterministic routing and LangChain-based multi-agent reasoning, implementing schema-aware NL2SQL, validation loops, semantic caching and vector-based context retrieval; improved average query response latency by 20% while supporting secure, role-aware natural-language analytics.
- Built a multi-agent construction intelligence system with an orchestrator-based architecture, routing natural-language queries across 10+ specialised agents and 8+ construction data domains, integrating Anthropic, OpenAI and Google Gemini APIs for automated analysis, response generation and dynamic visualisation.
- Engineered an AI-powered 2D Quantity Take-Off system for construction drawings, developing computer-vision and geometric-analysis pipelines for scale detection, wall/room reconstruction, symbol recognition, measurement extraction and MEP classification; delivered quantity extraction and BOQ generation, achieving ~72–77% lower response latency, ~96–97% faster drawing operations and ~60–63% smaller payload sizes through rendering and processing optimisations.
- Owned software engineering and AI automation infrastructure, developing asynchronous Python/FastAPI services, Angular/React interfaces and AI integrations; implemented PostgreSQL/Redis services, Docker-based environments, MCP-based Playwright browser automation, and CI/CD workflows for production delivery.

IOPEX TECHNOLOGIES

AI/ML Intern

Chennai, TN

July 2025 – Oct 2025

- Led a 6-member team; architected an end-to-end chunking optimizer supporting 5 chunking strategies and 4 execution modes, improving retrieval accuracy and context relevance across diverse document types.
- Built high-throughput embeddings pipeline (sentence-transformers) using 6-worker parallelism; ~60s per 100K rows; delivered RAG-ready semantic search via FAISS/Chroma, cosine similarity, and metadata filters.
- Developed OpenAI-compatible REST APIs with LangChain-orchestrated pipelines (core), LLM-agnostic integration-OpenAI, and a React UI for seamless uploads, search, and results visualization.

PROJECTS

AI AGENCY SCRAPER & ENGAGEMENT BOT — [Link](#)

2026

- Built a full-stack AI agency prospecting pipeline in n8n, using Apify for Instagram and X scraping, automated 0–100 lead scoring based on engagement, followers and bio signals, with deduplication and 100 qualified-lead daily cap per platform.
- Engineered a Groq (Llama 3 70B) DM generation workflow with rate-limit-safe delays, automated follow-up sequences after 3-day silence windows, and event polling for bio updates and new posts.
- Delivered daily automated reports to Google Sheets and email summarising follows, DMs, replies, and conversion rate; built a live HTML dashboard with real-time funnel visualisation and lead activity feed.

AI POWERED LEGAL DOCUMENT ANALYZER — [Link](#)

Feb 2025 – May 2025

- Built an OCR pipeline using Tesseract for text extraction and applied NLP for Named Entity Recognition, along with template matching using OpenCV and ORB/SIFT descriptors for accurate document validation.
- Developed a RAG-based compliance verification system using LangChain and FAISS to automate structured document analysis and streamline validation workflows.

SKILLS

Programming & Development: Python, SQL, JavaScript, TypeScript, Node.js, REST APIs

Frameworks & Libraries: FastAPI, Angular, React, Numpy, Pandas, Scikit-learn, TensorFlow, OpenCV, LangGraph, LangChain

Automation & AI Workflows: n8n, Prompt Engineering, AI agent pipelines, webhook integrations, MCP, A2A

Databases: MySQL, PostgreSQL, BigQuery, Vector Databases, Supabase

Tools & Platforms: Git, GitHub, Docker, Postman, Excel, Tableau, AWS, Redis

CERTIFICATIONS

- Google Analytics Certification (92%) — [Link](#)
- Google Data Analytics Professional Certificate (Coursera) — [Link](#)
